

Principal Investigator:

AUP number:

1) Provide complete details of the pursuit, capture, housing, handling and restraint procedures that will be used. Include an explanation for why these procedures were selected:

2) If tissue and/or blood sampling is carried out, provide details of procedures used.

3) With respect to capture and handling techniques to be used, provide details on the following;

- A) The potential for injury to animals
- B) The monitoring frequency
- C) The procedures for non-target organisms

4) List any relevant peer-reviewed literature dealing with the possible impacts of the type of capture method employed:

5) Indicate any long-term monitoring techniques to be used (e.g. radio, satellite telemetry). Are these expected to have any negative impact on the study animal? Explain:

6) Indicate what steps will be taken to minimize any stress due to capture, handling and other experimental procedures:

7) Explain the provisions in place for recovery, veterinary treatment or euthanasia of injured animals:

8) Indicate what permits have been applied for or been received:

9) If applicable, describe the transportation arrangements in place for moving animals from the wild to the laboratory:

10) Is this study expected to create any potential consequences to reproduction or survival of the animals studied? If yes, explain:

11) If applicable, explain the arrangements in place for disposition (i.e. euthanasia, release to field)
